

A SCHOOL CREATIVE-COMMUNITY TEACH-IN · SPRING 2026

# Lights, Camera, Agent.

A friendly guide to letting an AI helper pitch in on your video work — with **Higgsfield** as our first crew member.

For people who already know cameras, cuts, and story — and have never once wanted to learn “prompt engineering.”

a community teach-in

not a product pitch

nobody gets replaced today

Presented by **[your name]** · roughly 30 minutes + one small exercise · yes, you may steal these slides

# What this talk believes

**Agents and video absolutely work together.** The agent does not replace the filmmaker. It becomes an extra pair of hands — for planning, organizing, generating, revising, and moving creative work forward.

That's the whole message. The next 28 pages say it slowly, kindly, and with running examples — using Higgsfield's **official agent connection** as the working demo, because its setup is genuinely five minutes and its docs are public.

## Shape of the evening

28 pages ≈ 30 relaxed minutes, then a 10-minute hands-on exercise. One idea per page. No jargon without a translation.

## Honesty tags

Facts were checked against Higgsfield's own help pages on **Sept 3, 2026**. Anything that could drift is tagged **[VERIFY]** — see it as “call before the show,” not as doubt.

## Before you present

Pages 2–3 are **for you** — hide them on the night. Page 28 is a packing checklist: screenshots to grab, facts to re-confirm, prompts to pre-load.

## SAY IT LIKE THIS

If you present only three things, make it this thesis, the loop picture (page 10), and the exercise (page 22).

# Five things worth double-checking this week

This corner of the world moves monthly, so the deck speaks in [VERIFY] tags wherever a fact can drift. All five checks below take about fifteen minutes, and every link is repeated in the back-of-deck checklist.

## 1 • The doorway address

Is the agent connection still at **mcp.higgsfield.ai/mcp**?

How to confirm: Confirm on Higgsfield’s Help Center → “What is Higgsfield MCP, and how is it different from the web?”

## 2 • What the agent may do

The job list on page 9 came straight from their docs (generation, audio, reframe/upscale, clipping, balance). Anything added or removed?

How to confirm: Same help page, plus “How do I connect Higgsfield to Claude, ChatGPT, or another AI agent?”

## 3 • The price of admission

MCP use needs an **active paid Higgsfield plan**, and **every** agent-made generation spends credits — even on “unlimited” web plans.

How to confirm: Check your own plan tier and credit balance before any live demo.

## 4 • Where people can connect

Claude = custom connector · ChatGPT = official plugin (no audio there) · Cursor = marketplace · coding agents = CLI.

How to confirm: Confirmed in the “How do I connect...” article — re-skim it the week of the talk.

## 5 • The deep-end cameo

Open Montage (page 21) is described from **third-party write-ups**, not its own docs. Don’t quote star counts or pipeline numbers on stage.

How to confirm: If you mention it at all, quote only what its GitHub page says that day.

### SAY IT LIKE THIS

Nothing in this talk collapses if one of these changed overnight — the tags tell the room that updating is normal here.

## WHERE MOST OF US START

# Two rooms, one hallway

Most of us carry a quiet assumption: AI assistants live in one room, video tools live in another, and the rooms don't talk. Fair enough — it used to be true. Let's look at the two rooms.

### ROOM ONE · THE THINKER

An AI assistant is lovely company at the idea stage. Brainstorm, outline, rework the script... then it stops — and hands you a wall of text to go do something with.

---

Great at ideas. **Stops at the idea.**

### ROOM TWO · THE MACHINE

A video platform can produce astonishing media. But you drive every single step: every prompt, every pick, every export. It never once offers to carry anything.

---

Makes media. **You run every step.**

### THE HALLWAY

Connect an assistant to the right video tools, and the idea starts walking toward the footage by itself — with you watching at every doorway, holding the final yes.

---

The idea **carried into action.**

### SAY IT LIKE THIS

Ask for a show of hands: who's used AI to brainstorm? Who's generated AI video? Keep your hand up if you've connected the two. (Usually: nobody. That gap is the whole talk.)

## THE PICTURE TO KEEP

# An extra pair of hands

**On a real set, the director does not personally coil the cables.**

Think of the agent as a new production assistant. One who has somehow read every manual you own, never sleeps, never sighs, and will happily draft the fourteenth variation at midnight.

Now the honest part — and honestly, it's the whole deal: **this assistant has no taste. None at all.** It renders the fourteenth variation with the same confidence as the first.

So taste stays in your chair. Judgment stays in your chair. The final yes stays in your chair. That isn't a flaw in the arrangement. **That is the arrangement.**

### CALL SHEET · THE NEW PA

|                  |                                                         |
|------------------|---------------------------------------------------------|
| <b>Name</b>      | "The agent" — answers to plain English                  |
| <b>Skills</b>    | drafting, organizing, tool-wrangling, infinite patience |
| <b>Cannot do</b> | taste, context, caring whether it's good                |
| <b>Works for</b> | you. Reviews daily. Union of one.                       |

Start date: tonight, if you want. Notice period: also tonight.

### SAY IT LIKE THIS

If the room remembers one sentence tonight, make it "taste is your department."

## So what is an “agent,” really?

An agent is an AI assistant that can **do** things, not just **say** things. A chatbot is the friend who gives great advice from the couch. An agent is the intern who gets up off the couch: you name the goal, it walks over to the (very short) list of tools you’ve allowed it, picks one, and uses it.

Then it looks at what came back, tells you what happened, and takes the next step — or stops and asks you. You watch all of this happen out loud. There’s no hidden deliberation to trust or distrust: there are just **visible steps and visible results**, like an assistant thinking out loud while they work.

**The tools are the key.** An agent with no tools is back on the couch, giving advice. Give it a doorway to Higgsfield and suddenly the intern can run to the machine room — page 9 shows exactly how far (and no further).

### SAY IT LIKE THIS

Lean on “a very short list of tools we’ve allowed.” Permission and visibility are the entire safety story — say that plainly.

# MCP is the standard socket

Once upon a time, every lamp shipped with its own plug, and every new lamp meant calling an electrician. Then the world agreed on a standard socket — and plugging in a lamp became boring, in the best possible way.

**MCP is that agreement, but between AI assistants and tools.** A shared, published way for an assistant to ask a service: “what can you do?” — and then “please do this one, with these details.” If both sides follow the agreement, any assistant can plug into any tool that offers itself. No custom wiring per pair.

**That is genuinely all you need to know to use one. Cross my heart.**

## For the curious — one line only:

MCP = **Model Context Protocol** — an open standard. Higgsfield runs a public MCP doorway (a “server”), one web address long, listed on page 25. No schemas, no JSON, no auth talk tonight; the appendix has the keys if you want them.

## SAY IT LIKE THIS

If someone asks a deep technical question here, smile warmly and point at the appendix. That is what the appendix is for.

## OUR WORKING EXAMPLE

# Meet Higgsfield (the video side)

For anyone who hasn't met it: **Higgsfield is a browser-based studio for AI-generated images and video** — and its personality is refreshingly film-set. It's known for camera moves with actual cinematography instincts (crash zooms, dolly glides, FPV swoops), for keeping a character's face consistent across shots (a feature called **Soul**), and for putting many different video models — Veo, Kling, Seedance, Minimax Hailuo and friends — behind one login.

Why it stars in this talk: **its agent doorway is official, documented in plain language by Higgsfield itself, and takes about five minutes to set up.** We'll use it as the example all evening — but every idea transfers to any tool that opens a similar door.

Things it's documented to do through the agent connection:

image & video generation

deliberate camera moves

Soul characters

voiceover · dubbing

upscale · reframe · background removal

YouTube → short clips

credit balance on demand

Sources: Higgsfield Help Center integration pages + higgsfield.ai, re-read on Sept 3, 2026. Full citations on page 26.

### SAY IT LIKE THIS

If half the room already uses Higgsfield on the web: wonderful — tonight is about the other front door, the one the assistant uses.

# The connection: Higgsfield's agent doorway

## THE FIVE-MINUTE VERSION (Claude example)

- 1 Open Claude → **Settings** → **Connectors**.
- 2 Choose **Add custom connector**; name it "Higgsfield."
- 3 Paste the doorway address from page 25 (yes, that's the whole trick).
- 4 Click **Connect** and sign in to Higgsfield once to approve it.
- 5 Test it by asking: **"What's my Higgsfield credit balance?"** If it answers with a number, you're connected. Really.

Needs an **active paid plan**. ChatGPT uses an official plugin instead; Cursor has it in its marketplace. Same sign-in idea everywhere. [VERIFY plan + app list]

## WHAT THE AGENT MAY THEN DO (straight from the docs)

- ✓ Generate **images and video** on any of its models — models you can name in plain words
- ✓ Make **audio**: voiceover, voice change, dubbing
- ✓ **Tidy-up jobs**: upscale, reframe/expand, remove backgrounds
- ✓ Use **Soul characters** and saved reference Elements by name
- ✓ **Personal Clipper**: turn a long YouTube video into short clips
- ✓ Report your **credit balance** and past generations

**What we are NOT claiming tonight:** it does not drive your editing timeline, does not judge your cut, and never generates free work — **every agent-made generation spends credits.**

Results land in your normal Higgsfield Assets, tagged as agent-made — so nothing is stranded inside the chat.

## SAY IT LIKE THIS

The credit-balance question is Higgsfield's own official connection test. It's also a lovely first "the machine answered!" moment for the room.

# It's a loop, not a vending machine

Expect **lap three** to be where it starts getting good. The agent isn't supposed to nail your taste on the first try — it's supposed to hand you something real to react to, fast, so your taste has something to push against.

## SAY IT LIKE THIS

Walk this picture once with the showcase story before the step pages: 'watch how often a human makes a decision.' (Answer: every lap.)

## TONIGHT'S DEMO

# One small win: a fifteen-second showcase promo

Our pretend job: a **15-second promo inviting people to the spring student film showcase**. Small on purpose, and that's the point. Tonight's trophy is not a finished promo — it's **one full lap around the loop**, so your hands remember the shape of it.

Three steps, each on its own page, and we'll say out loud who does what at every one:

### Step 1

Idea → **shot list**

pure planning — works with any assistant, zero setup, zero credits

### Step 2

Shot → **one key frame**

the agent calls Higgsfield for a still you can judge — cheap, fast, low-stakes

### Step 3

Frame → **one moving draft**

the kept frame becomes a short clip with a deliberate camera move

**The cast:** **YOU** — director, taste, final yes · **THE AGENT** — planning & tool-wrangling · **HIGGSFIELD** — makes the actual media

### SAY IT LIKE THIS

Swap in a real event from your own community — a screening, a gig, a fund-raiser. Familiar stakes make the demo land much harder.

# From fuzzy idea to shot list — no connection needed

## YOU SAY

“I’m making a 15-second promo for our spring student film showcase. Mood: handmade, a little mischievous, ends on the date. Give me six shots?”

## THE AGENT DOES

Thinks in beats: proposes six shots with rough timings, a hook shot up front, and one line of voice-over. Zero credits spent — this is the planning muscle, and **any assistant can do this part**. Seriously, any of them.

## HIGGSFIELD DOES

Nothing yet. The machine room stays quiet and your wallet stays shut.

## YOU REVIEW

Cross out shot 4 (too moody for us) and ask for “more paper-craft, less lens flare.” Thirty seconds of taste, applied.

## YOU NOW HAVE

A shot list you’d actually shoot — in about four minutes, without booking a meeting room.

### — WHERE WE ARE IN THE LOOP —

## SAY IT LIKE THIS

Land this quietly: that step alone saves real prep time, and it worked before anything was connected to anything.

# One frame you can judge — the agent calls Higgsfield

|                 |                                                                                                                                                                                                                             |
|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| YOU SAY         | “Take shot 1 and make me one key frame to react to — paper-craft look. And tell me the credit cost first, then wait for my yes.”                                                                                            |
| THE AGENT DOES  | Checks the price and <b>waits</b> . On your yes, it writes the generation request — look, framing, format — and calls the Higgsfield image tool. [verified: image generation + “cost first” prompting are both in the docs] |
| HIGGSFIELD DOES | Generates the frame. It lands in your normal Higgsfield Assets, tagged as agent-made, so you also own it on the website. [verified]                                                                                         |
| YOU REVIEW      | “Warmer. Less symmetry. Keep the scissors.” (You are now directing software the way you’d direct a storyboard artist.)                                                                                                      |
| YOU NOW HAVE    | A key frame — plus the one sentence you’ll reuse forever: <b>“cost first, wait for my yes.”</b>                                                                                                                             |

## — WHERE WE ARE IN THE LOOP —

### SAY IT LIKE THIS

That sentence is Higgsfield’s own suggested best practice from their docs. Steal it proudly and teach it as a reflex.

## Same shot, now in motion — with a camera move on purpose

- |                        |                                                                                                                                                                          |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>YOU SAY</b>         | “Animate the frame we kept: slow push-in, about four seconds, gentle. Then one alternate take with a slightly faster push.”                                              |
| <b>THE AGENT DOES</b>  | Uses the kept frame as the starting image and requests two versions — same scene, two camera behaviors. [verified: video generation + referencing an earlier generation] |
| <b>HIGGSFIELD DOES</b> | Renders two short drafts into your Assets. Credits spent: exactly what you approved, not a penny more.                                                                   |
| <b>YOU REVIEW</b>      | The slow push wins the opening; the faster take is filed under “maybe shot 5.” Notice who decided. <b>It wasn’t the agent.</b>                                           |
| <b>YOU NOW HAVE</b>    | One lap, complete: shot list + key frame + two motion drafts. Next lap: voice-over, the date card, the other five shots.                                                 |

### SAY IT LIKE THIS

If someone asks about fancier control: yes, a “motion control” mode exists that accepts a motion-reference video [verified] — and no, we do not need it tonight. Chapter two.

## STEAL THIS PROMPT

# The one-sentence starter

“Help me turn this rough idea into the next useful video-production step: a 15-second promo for our spring student film showcase – handmade mood, a bit mischievous, ends on the date. Ask me only the questions you actually need. Then use the available Higgsfield tools to draft one key image – tell me the credit cost first and wait for my go-ahead. Show me what you did, and give me a result I can react to.”

## Why this works:

- It gives **real context** — event, length, mood. Agents run on specifics the way crews do.
- It names **one concrete, allowed action** — nothing vague, nothing heroic.
- “Something I can react to” asks for a **sketch, not a masterpiece** — sketches invite taste.
- “Only the questions you actually need” means no twenty-question interviews.
- The cost-first clause keeps your **wallet in the director’s chair**.
- And notice the language: none. It’s a brief. If you can brief a camera operator, you can brief an agent.

## SAY IT LIKE THIS

Invite everyone to photograph this page. The prompt matters less than the posture: brief like a director, review like a director.

BACK AT YOUR DESK

# Where this actually pays rent

## Developing a visual concept

works today

Talk it out, then ask for draft frames on demand to argue with.

## Shot lists & pre-pro paperwork

always available

Pure agent muscle — no connection, no credits, no excuses left.

## Alternate directions

works today

“Same brief, three flavors” is one sentence. Each take spends credits — budget for it.

## Rough versions & previz

works today

Kept frame → short motion drafts with named camera moves.

## Consistent characters

works today · [VERIFY plan]

Call your Soul character by name across shots and sessions.

## Voice-over & dub drafts

works today

Audio from the same chat. (Heads-up: the ChatGPT plugin skips audio.)

## Repurposing

works today

Short clips from a long video; reframe for vertical. Mind footage rights, as ever.

## The boring 40%

always available

Briefs, checklists, plans, status summaries — the agent’s natural habitat.

“Works today” = listed in Higgsfield’s current docs as of Sept 3, 2026. Professional habit: try each once yourself before promising a crowd.

### SAY IT LIKE THIS

Open the floor for one minute: which row would save **you** the most time this month? Their answers are your best word-of-mouth.

# Fair questions deserve straight answers

## “I’m not technical.”

You don’t need to be. Setup is: paste one address, sign in once, talk normally. If you can export a ProRes with the correct audio mapping, you are **wildly overqualified** for this.

## “The agent will replace my creative judgment.”

It can’t — it doesn’t have any. Watch the demo pages again: it proposed, you disposed. **Every lap ends in a human decision.** That’s the design, not a limitation.

## “I already know video software.”

Perfect — you’re exactly who this is for. The agent never touches your timeline or your NLE license. It **feeds** them: shot lists, reference frames, drafts, voice-over tests. Your craft stays yours; the legwork gets lighter.

### SAY IT LIKE THIS

Never argue with these worries — each one is perfectly rational. Show the loop picture again; the loop is the answer.

## ...and the quieter ones too

**“I have plenty of tokens, but no idea what to ask for.”**

Completely normal — it’s like owning film stock in a quiet week. The next page is a fill-in-the-blanks recipe, and the exercise at the end is your first shoot. **Tokens expire; habits don’t.**

**“I don’t want an AI making creative decisions for me.”**

Then don’t let it — generation is not decision. The loop puts a gate between “made” and “used,” and **you are the gate**. If a workflow ever hides that gate, leave the workflow, not your judgment.

**“This sounds like another complicated platform to learn.”**

It’s mostly one address pasted into an app you already have, then talking like a director. Give it a month; if it earns nothing, unplug it. No sunk cathedral, no hurt feelings.

### SAY IT LIKE THIS

With experienced creators, respect lands better than reassurance. Their skepticism is professional equipment, working as intended.

# “I have tokens” is not a plan

Tokens are film stock. Lovely to own, completely inert on the shelf. A **workflow** is knowing your next three shots. Here’s the five-part recipe that closes the gap — it works in any assistant, connected or not:

## Filled in, it sounds like this:

CONTEXT promo for the spring showcase · GOAL a test opening frame · CONSTRAINTS 15 seconds total, paper-craft mood, tiny credit budget · ACTION draft one frame, cost-first · REVIEW I’ll know it’s right when it looks handmade, not glossy.

That’s the whole pattern. Five pieces of information you already carry around — said out loud, in order, to something that never forgets them.

## SAY IT LIKE THIS

This page doubles as a handout: five blanks on paper, filled in during the exercise. Nobody needs usernames and passwords to practice this part.

# The deal: you're the director of this too

## YOU BRING

taste  
context  
priorities  
the final yes

## THE AGENT HANDLES

drafts & variations  
tool-wrangling  
the boring 40%  
remembering details

## YOU DECIDE

what ships  
what dies  
what's next  
when to stop

Recommended first words in any session, quoted straight from Higgsfield's own docs:

**“Before generating anything, tell me the credit cost and wait for my confirmation.”**

**Nothing spends, nothing generates, nothing ships without your nod.** If a workflow ever makes you feel like the audience instead of the director, the workflow is set up wrong. Fix the setup — never yourself.

## SAY IT LIKE THIS

Slow down here and give it air. For a room full of craftspeople, this page — not the technology — is what makes tonight safe.

# Where this road leads (no homework)

Once the small loop feels ordinary, there's a deeper end of the pool. The most interesting current example is **Open Montage**, an open-source project that turns a coding assistant into something closer to a whole production office: you describe a video in a sentence, and a crew of agents researches, scripts, storyboards, generates assets, and assembles a cut for your review. It runs on your own machine — no cloud login, no shiny website.

## Honesty corner

That description comes from third-party write-ups (Aug-Sep 2026), not from running it ourselves. **[VERIFY]** Treat star counts, pipeline numbers, and superlatives as stage-whispers, not facts — or check its GitHub page yourself before quoting. Early users both rave and grumble, which is the normal sound of frontier open source.

Do you need it tonight? Not remotely. It's simply nice to know the road keeps going — from “one shot at a time” all the way to “an assistant that organizes a small crew for you.” Start with tonight's loop; everything else is the same idea wearing bigger boots.

## SAY IT LIKE THIS

If asked “should we adopt it?": try the small loop for a month first. Tools change monthly; the habit you build transfers to all of them.

# Your first lap — pick a lane

## LANE A · CONNECTED (if tonight's link is set up)

- 1 Handshake: ask **“What’s my Higgsfield credit balance?”** If it answers with a number, the doorway works. (That’s their official test.)
- 2 Paste the page-15 prompt, swapping in **your own rough idea** — a real one from your desk.
- 3 Approve **one** draft. Then react like a director: two adjectives and a verb.
- 4 Ask for one change. Watch the loop turn.
- 5 **Trophy:** one frame you’re willing to show a neighbor.

## LANE B · NO SETUP AT ALL (works everywhere, forever)

Open any AI assistant — the one you already have — and paste:

“Here’s my rough video idea: \_\_\_\_\_. Turn it into 5 numbered production steps. For each step, flag which parts a connected video tool could do for me — and which parts need my human judgment.”

- 1 Circle one **tool-shaped** step and one **judgment-shaped** step.
- 2 Notice: you just designed an agentic workflow. With a pencil.
- 3 **Trophy:** the shape of a workflow with your name on it.

Then swap with a neighbor. The best question to ask each other: **“Where did it surprise you?”**

## SAY IT LIKE THIS

Lane B is secretly the entire philosophy in one exercise: the agent plans, tools make things, humans judge. Many people find B more convincing than the demo.

## TO TAKE HOME

# Agents aren't a different art form

**They're one more crew position on a set you've already been running for years — a way to keep projects moving on the nights when energy is low but taste is still wide awake.**

You already understand video. That part was never in question. Starting tonight, there's an extra pair of hands for the parts that slow you down — the blank-page part, the fourteenth-variation part, the “someone has to organize this” part.

### THIS WEEK'S HOMEWORK (small, promise)

- Take **one rough idea** — a real one.
- Get **one shot list** (any assistant can do this).
- Make **one draft** — frame or clip, your call.
- Bring whatever happens to the next session — glorious or hilariously broken. We take it apart together; first round of troubleshooting is on me.

**First-timer tip:** start with images (cheap, fast, easy to judge) before motion (pricier, slower, harder). Confidence is a resource too — budget it like credits.

### SAY IT LIKE THIS

End on generosity, not features. Then open the floor — the Q&A after this talk is always about people's own projects. Budget time for it.

# Glossary: ten terms, zero snobbery

**Agent**

an AI assistant that can use tools you've allowed — it does steps, not just suggestions.

**MCP (Model Context Protocol)**

the “standard socket” — a shared, open way for assistants and tools to connect.

**Tool call**

one visible action the agent takes through the connection — e.g. “generate one image.” You see each one.

**Credits**

Higgsfield's pay-per-generation meter. Agent-made generations always spend them.

**Assets**

your media library on higgsfield.ai; agent-made results land here, tagged as such.

**Agentic workflow**

working with an agent in laps: brief → it acts → you review → next lap.

**Connector**

the plug end: the named link you add inside your assistant (e.g. “Higgsfield” in Claude's settings).

**Prompt**

your brief to the assistant. Plain words beat clever words.

**Soul (Higgsfield)**

their consistent-character feature — a cast member whose face survives across shots.

**Human-in-the-loop**

the rule that a person reviews and approves before anything ships. Tonight's entire religion.

**SAY IT LIKE THIS**

Photograph this page too. Vocabulary is half the intimidation — naming things kindly disarms it.

# A1 · The connection, exactly

Everything on this page comes from Higgsfield’s own Help Center, re-read on **September 3, 2026**. If you’re reading this much later, skim the two source articles on page 26 and update whatever drifted.

## THE FACTS OF THE DOORWAY

Doorway address (**MCP server URL**):

**`https://mcp.higgsfield.ai/mcp`**

- ✓ Sign-in: authorize with your Higgsfield account (OAuth — no API key to copy or leak)
- ✓ Requirement: an active **paid** Higgsfield subscription
- ✓ Your results appear in Higgsfield → Assets, tagged as agent-made
- ✓ Official connection test: ask “What is my Higgsfield credit balance?”

## CONNECTING, PER APP (each is “add + sign in once”)

**Claude (web & desktop)** — Settings → Connectors → Add custom connector → paste the address → Connect → sign in.

**ChatGPT** — the official **Higgsfield plugin** from the plugin directory. (No audio or website-building via ChatGPT.)

**Cursor** — find Higgsfield in **Customize → Marketplace** → Add → sign in.

**Claude Code · OpenClaw · Hermes** — these install the **Higgsfield CLI** themselves; you just approve and sign in via the browser.

**Any other MCP-compatible agent** — paste the same doorway address in its connector settings.

## SAY IT LIKE THIS

Everything here is deliberately boring: one address, one sign-in, one paid plan. The magic is what you say after it’s connected.

## A2 · What it may do, what it costs, where we checked

### OPERATIONS LISTED IN THE DOCS (checked Sept 3, 2026)

- ✓ Image & video generation, all models (name the model in ordinary words)
- ✓ Upscale · background removal · expand image / reframe video
- ✓ Kling 3.0 Motion Control (character image + motion-reference clip)
- ✓ Soul characters & reference Elements, called by name
- ✓ Audio: voiceover, voice cloning, voice change, video dubbing
- ✓ Personal Clipper: YouTube video → short clips (mind footage rights)
- ✓ “Skills”: preset multi-step workflows (marketing, UGC, motion & design...)
- ✓ Utility: check credit balance, list generations & uploads

### MONEY & FINE PRINT

**Every agent-made generation deducts credits** at standard rates — even on web plans with free or unlimited use. The connection falls under Higgsfield’s **Developer Terms**: you’re responsible for what an agent generates through your account.

### PASSING REFERENCE IMAGES

The agent can’t see files pasted into the chat. Tell it what you want to use and it opens an **upload window** right in the conversation (or give it a public image link, or the name of a past generation).

### SAY IT LIKE THIS

If you print handouts, this page and the next two are the handout. The talk is better conversational; let the paper carry the URLs.

# A3 · The full walkthrough, copy-paste ready

## SCRIPT 1 · PLANNING (any assistant, no connection, no credits)

"I'm making a 15-second promo for our spring student film showcase. Mood: handmade, a little mischievous, ends on the date. Give me six shots with rough timings and one line of voice-over."

Expect: six usable beats in under a minute. You cut shot 4; it rebalances the rest.

## SCRIPT 2 · ONE FRAME (agent + Higgsfield, image generation)

"Take shot 1 and make me one key frame to react to – paper-craft look. Tell me the credit cost first and wait for my yes."

Expect: a price, a pause, then one frame in your Assets. You review: "warmer, less symmetry, keep the scissors."

## SCRIPT 3 · MOTION (agent + Higgsfield, video generation)

"Animate the frame we kept: slow push-in, about four seconds, gentle. Then one alternate take with a slightly faster push."

Expect: two short drafts, charged as approved. You pick the slow one for the opening; file the fast one under shot 5.

### If things go sideways on stage

Agent answers without using any tools → reconnect the connector (their own troubleshooting tip). · Wi-Fi dies → narrate over the screenshots from your checklist (page 28). · The frame comes back odd → congratulations, you've got the perfect excuse to model lap two out loud: "taste is why the loop exists."

### SAY IT LIKE THIS

Prompts are scripts, not spells: keep the bones (context, questions-only-as-needed, one allowed action, cost-first), change every noun to fit your room.

# Packing checklist for the presenter

Fifteen quiet minutes, the week of the talk. Check things off; cross out what you verified; delete what you can't.

## FACTS TO RE-VERIFY

- ☐ Doorway address still **mcp.higgsfield.ai/mcp**
- ☐ Operation list on page 9 unchanged
- ☐ Paid-plan requirement + your credit balance
- ☐ Per-app connection list (Claude / ChatGPT plugin / Cursor / CLI)
- ☐ Open Montage numbers — or skip that page

## SCREENSHOTS & ASSETS TO COLLECT

- ☐ Settings → Connectors, Higgsfield listed as active
- ☐ The Higgsfield sign-in / authorize window
- ☐ One good generated frame + one draft clip (fallback for dead Wi-Fi)
- ☐ Assets page showing an agent-made tag
- ☐ Links to pre-load: the two Help-Center articles + the page-15 prompt in your notes app

## SETUP TO CONFIRM ON THE DAY

- ☐ Paid plan active; credits topped up past the demo's appetite
- ☐ Balance question answered live once before the room arrives
- ☐ Claims to **remove** if unverified: model names beyond Soul/Veo/Kling/Seedance/Hailuo, preset counts, anything about timeline editing, Open Montage numbers

## ACCESSIBILITY & READABILITY

- ☐ Big text held up at the back of the room? (body ≥ ~14pt equiv.)
- ☐ High contrast: warm ink on cream, no gray-on-gray
- ☐ One idea per page; numbered pages for “go back two” moments
- ☐ Describe every visual out loud; printed handout = appendix pages
- ☐ ~30 min talk + 10 min exercise; leave air for project questions

The exact demo prompt lives on page 15; the long script on page 27; the honesty tags live everywhere. Good luck — it'll be great.
